

TheraTogs ULTRA Autism / Sensory Processing Disorder System

It's a wearable hug - discreetly hidden under your client's clothes!

The **TheraTogs ULTRA Autism/SPD System** is designed specially for children with issues related to:

- Autism Spectrum Disorder (ASD)
- Sensory Processing Disorder / Sensory Integration (SPD/SI)
- ADD/ADHD

The TheraTogs system can be used to address such as issues as hypersensitivity, difficulty in focusing attention, 'stimming', holding still, and coordinating movement.

TheraTogs are especially effective at calming patient behaviors and increasing patient attention - which can help improve the practice and efficacy of other management modalities.

The Autism / Sensory Integration System provides the tactile and proprioceptive input that has been shown to help children with ASD, SPD and ADHD.

I have found the TheraTogs sensory system to be a great asset in treating children with proprioceptive and tactile processing problems, especially those who also have eczema. The children who wear the suit have improved in their abilities to participate with their families and other treatments they attend.

-- Tina Blythe OTR/L

If your client has these indications...	A TheraTogs Autism/SI System can provide...
Sensory Proprioception Deficit and/or Attention Deficit	Compression to the torso and hips to enhance body awareness and promote a calming or grounding experience
Mild hypotonia resulting in difficulty in coordinating motion	Dynamic and adjustable postural support and compression through the spine and hip joints
Motor Skills Deficit (sitting or standing)	Compression and postural support through the spine and hip joints that is adjustable for sitting and standing therapy modalities

System Benefits

The TheraTogs ULTRA Autism/SPD System provides the following:

- ✓ The cozy, foam-lined, breathable TankTop applies gentle compression to the torso to enhance tactile and proprioceptive body awareness.
- ✓ The similarly cozy Hipster provides more body awareness of the hips and thighs, and serves as an anchor for securing the TankTop and for attaching compression straps if further “grounding” is needed.
- ✓ Abdominal support strap that also holds the compression straps against the body.

Note: Although the Autism/SPD System includes basic strapping for sensory input applications, additional strapping may be purchased separately to address biomechanical or postural issues.

Model Sizes

Model No.	Description
#GSI109	Infant Autism/SPD System 15-25 lbs
#GSI209	Pre-School Autism/SPD System: 25-45 lbs
#GSI309	Pediatric Autism/SPD System: 45-65 lbs
#GSI409	Petite Adult Autism/SPD System: 65-110 lbs
